## Networking topologies

Up to 32 fire control panels and fire control terminals can be connected in a single cluster (C-WEB/SAFEDLINK) or up to 16 stations when the cluster is connected to a danger management system.

Using a fiber-optic Backbone (C-WEB/LAN) up to 14 of the above mentioned clusters (with up to 16 stations each) can be networked. The entire network may contain up to 64 stations.

## Function characteristics

---

- The FT724 fire terminal is an operating panel remote from the central control panel that can be operated with its own power supply as well, as an option.
  - The operating unit has installation slots for optional interfaces such as RS232, RS485, networking modules (SAFEDLINK) and a key switch.
  - Each station has an Ethernet connection
  - The high-performance C-WEB makes it possible to network up to 64 fire control panels FC722/724 and fire terminals FT724 together as required.
  - Max. 5 fire terminals with system wide view programmable
  - Connection of Siemens Danger Management System
- For details about system networking, please refer to product data sheet A6V10227649.
