SIEMENS 3¹⁴⁶

Synco™ 700

Universal Modules

RMZ78...

Extension modules for use with controls of the Synco™ 700 family.

Use

For heating, ventilation, air conditioning and chilled water plant equipped with controls of the Synco™ 700 family.

Functions

The universal modules are designed to increase the number of inputs and outputs of Synco™ 700 controls, thus providing additional control and monitoring functions.

Type summary

Type reference	Number of universal inputs	Number of analog outputs	Number of relay of N.O. contacts	utputs Changeover contacts
RMZ785	8	_	_	_
RMZ787	4	0	3	1
RMZ788	4	2	1	1
RMZ789	6	2	2	2

Product number	Designation
RMZ785	Universal modul (8 UI)
RMZ787	Universal modul (4 UI, 4 DO)
RMZ788	Universal modul (4 UI, 2 AO, 2 DO)
RMZ789	Universal modul (6 UI, 2 AO, 4 DO)

When ordering, please give name and type reference, for example:

Universal module RMZ785

The module connector listed under "Accessories" must be ordered as a separate item, if required.

Equipment combinations

The universal modules must be used in connection with controls of the Synco[™] 700 family. At present, the following combinations are possible:

Type of Synco device	RMZ785	RMZ787	RMZ788	RMZ789
Universal controller RMUB	•	•	•	_
Heating controller RMH760B		•	_	•
Boiler sequence controller RMK770		•	•	•
Control center RMB795		•	_	_
Control and monitoring unit RMS705B		•	•	_

For details of these Synco devices, refer to Product Range Description S3110 or the document of the selected application.

Product documentation

Name	Document no.
Mounting Instructions	M3110
Product Range Description	S3110
Declaration of Conformity (CE)	T3110
Environmental Declaration	E311002

Technical design

The RMZ78... universal modules complement the range of Synco[™] 700 controls. They cannot be operated autonomously.

The universal modules are incorporated into the Synco[™] 700 controls in the basic configuration. All settings associated with the universal modules are made on the relevant Synco[™] 700 control.

The signals from sensors, signal sources, etc., are delivered to the Synco[™] 700 device for handling. The control signals and commands generated by the control are fed back to the respective universal module from where they are passed on to the connected actuating devices.

The universal module is powered by the relevant Synco[™] 700 control, which also identifies and monitors the module.

Basic design

In terms of mechanical design, the extension modules are identical with the Synco™ 700 controls, No wiring is required between the individual modules or between module and controller. The electrical connections are established by attaching the module to the control.

Synco™ 700 controller with attached RMZ78... module

Operation

The extension modules have no setting and operating elements. Operation is accomplished with the help of the RMZ790 or RMZ791 operator unit. Exception is the LED, which indicates the module's operating state.

Operating, display and connecting elements

- 1 Connecting elements for Synco™ 700 control or another extension module
- 2 Catch for fitting the module to a top hat rail
- 3 Fixing facility for the cable tie (cable strain relief)
- 4 LED (green) for indicating the operating state
- 5 Connecting elements for another extension module
- 6 Rest for the terminal cover

Accessories

Accessory	Type reference	Data Sheet
Module connector	RMZ780	N3138

Engineering

- Fuses, switches, wiring and earthing must be in compliance with local safety regulations
- Sensor cables should not be run parallel to mains-carrying cables powering loads such as fans, actuators and pumps

Mounting and Installation

- The modules are designed for:
 - Mounting in a standard cabinet conforming to DIN 43 880
 - Wall mounting on an existing top hat rail (EN 50 022-35x7.5)
 - · Wall mounting with 2 fixing screws
 - Flush panel mounting
- Not permitted are wet or damp spaces; the permissible ambient temperatures must be observed
- Disconnected the system from power supply prior to mounting and installing the module
- The module insert must not be removed from the terminal base!
- The module must be fitted on the right hand side of the Synco™ 700 control in the correct order, in accordance with the internal configuration
- The extension modules need not be wired, neither between themselves nor to the Synco™ 700 control. The electrical connections are made automatically when attaching the modules. If it is not possible to arrange all extension modules side by side, the first of the detached modules must be connected to the previous module or the Synco™ 700 control by using the RMZ780 module connector. In that case, the cumulated cable length must not exceed 10 meters
- The connection terminals for protective extra low-voltage are located in the upper half of the module, those for mains voltage (actuators and pumps) at the bottom
- Only one solid or stranded wire may be connected to each terminal (spring cage terminals). For fixing the wires, the cables must be stripped by 7 to 8 mm. To introduce the wires into the spring cage terminals, or to remove them, a screw driver size 0 or 1 is required. Cable strain relief can be ensured with the help of the lugs for cable ties
- The module mounted on a top hat rail together with other modules can only be removed from the rail after the 3 catches have been brought into their release and hold position (audible "click"). After removal, the catches must be pushed back into their snap-on position
- The module is supplied complete with Mounting Instructions

Commissioning

During the commissioning process, the outputs are in a defined off state.

Disposal

The device is considered an electronics device for disposal in terms of European Directive 2012/19/EU and may not be disposed of as domestic garbage.

- Dispose of the device through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations..
